Report No.: TB-FCC155903

Page: 1 of 19

FCC Part 15B Test Report

TB170916728 Application No.

Applicant USC056

Equipment Under Test (EUT)

EUT Name Power bank

Model(s) SP8186, T1036

Brand Name

Receipt Date 2017-09-08

2017-09-08 to 2017-09-11 **Test Date**

2017-09-11 **Issue Date**

Standards FCC Part 15:2016 Subpart B

Conclusions **PASS**

In the configuration tested, the EUT complied with the standards specified above

The EUT technically complies with the FCC requirements

Test/Witness Engineer

Approved & Authorized

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in the report.

TB-RF-074-1.0

1. General Information

1.1 Client Information

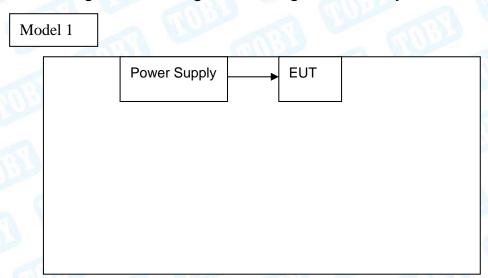

Applicant		USC056
Address		China
Manufacturer		USC056
Address	•	China

1.2 General Description of EUT (Equipment Under Test)

EUT Name	Power bank
Model(s)	SP8186, T1036
Brand Name	
Power Supply	Input: DC 5V/1500mA,Output: DC 5V/2100mA
	Capacity: 4400mAh

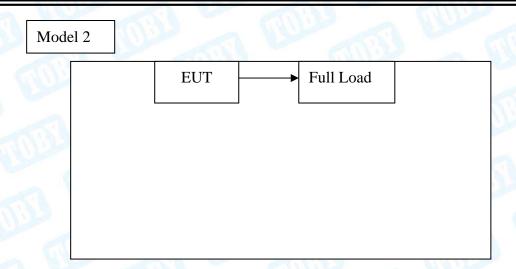

Remark: All above models are identical in schematic, structure and critical components except for only different appearance; therefore, FCC testing was performed with SP8186

1.3 Block Diagram Showing The Configuration of System Tested

1.4 Description of Support Units

Name	Model	S/N	Manufacturer	Used "√"
Power Supply	02D050200	W. (777)	BSY	√

1.5 Description of Test Mode

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned follow was evaluated respectively.

For Conducted Test						
Final Test Mode	Description					
Mode 1	N/A					
	For Radiated Test					
Final Test Mode	Description					
Mode 1	Charging Mode					
Mode 2	Discharging Mode					

1.6 Test standards

The objective is to determine compliance with FCC Part 15, Subpart B, and section 15.107, 15.109 rules.

Maintenance of compliance is the responsibility of the manufacturer. Any modification of the product, which result in lowering the emission, should be checked to ensure compliance has been maintained.

Page: 5 of 19

1.7 Test Facility

The testing report were performed by the Shenzhen Toby Technology Co., Ltd., in their facilities located at 1A/F., Bldg.6, Yusheng Industrial Zone, The National Road No.107 Xixiang Section 467, Xixiang, Bao'an, Shenzhen, Guangdong, China. At the time of testing, the following bodies accredited the Laboratory:

CNAS (L5813)

The Laboratory has been accredited by CNAS to ISO/IEC 17025: 2005 General Requirements for the Competence of Testing and Calibration Laboratories for the competence in the field of testing. And the Registration No.: CNAS L5813.

FCC List No.: (811562)

The Laboratory is listed in the United States of American Federal Communications Commission (FCC), and the registration number is 811562.

IC Registration No.: (11950A-1)

The Laboratory has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing. The site registration: Site# 11950A-1.

3. Conducted Emission Test

3.1 Test Standard and Limit

3.1.1Test Standard

FCC Part 15 B: 2016

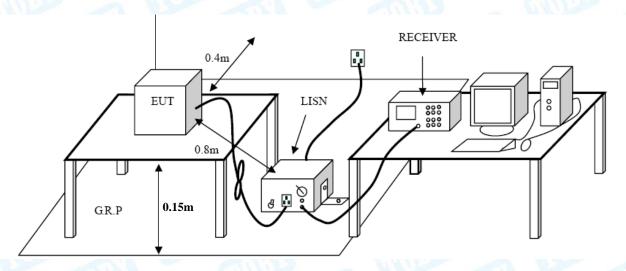

3.1.2 Test Limit

Conducted Emission Test Limit (Class B)

Eroguanav	Maximum RF Line Voltage (dBμV)					
Frequency	Quasi-peak Level	Average Level				
150kHz~500kHz	66 ~ 56 *	56 ~ 46 *				
500kHz~5MHz	56	46				
5MHz~30MHz	60	50				

^{*}decreasing linearly with logarithm of the frequency

3.2 Test Setup

3.3 Test Procedure

The EUT was placed 0.15 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/50uH of coupling impedance for the measuring instrument.

The cables shall be insulated (by up to 15 cm) from the horizontal ground reference plane, and shall be folded back and forth in the center forming a bundle 30 to 40 cm long.

I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.

Page: 9 of 19

LISN at least 80 cm from nearest part of EUT chassis.

The bandwidth of EMI test receiver is set at 9kHz, and the test frequency band is from 0.15MHz to 30MHz.

3.4 Test Data

This test is not applicable.

Page: 10 of 19

4. Radiated Emission Test

4.1 Test Standard and Limit

4.1.1 Test Standard

FCC Part 15 B: 2016

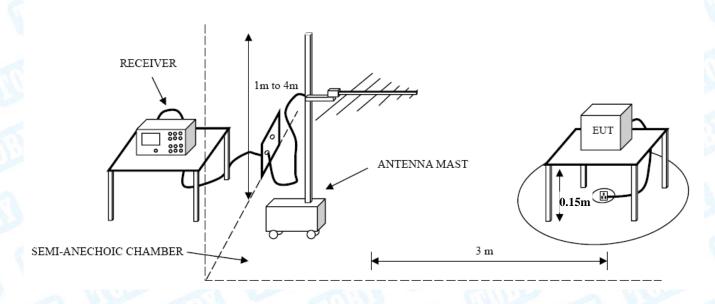

4.1.2 Test Limit

Radiated Emission Test Limit (Class B)

Frequency MHz	Field Strengths Limits dB(μV/m)
30 ~ 88	40.0
88 ~ 216	43.5
216 ~ 960	46.0
960 ~ 1000	54.0

^{*} The lower limit shall apply at the transition frequency.

4.2 Test Setup

4.3 Test Procedure

The EUT was placed on the top of a rotating table which is 0.15 meters above the ground. EUT is set 3.0 meters away from the receiving antenna that mounted on a antenna tower. The table was rotated 360 degrees to determine the position of the highest radiation, the antenna can be moved up and down between 1.0 meter and 4 meters to find out the maximum emission level. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

Measurements shall be made with a quasi-peak measuring receiver in the frequency range

^{*} The test distance is 3m.

Report No.: TB-FCC155903 Page: 11 of 19

30MHz to 1000MHz. If the Peak Mode measured value compliance with and lower than quasi-peak mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.
